New Portable Screener has 47 HP Diesel Engine and Adjustable Conveyor for Fast Setup and Loading

Lake City, PA. January 15, 2010 – Ajusta-Buckets has introduced a new line of hydraulic swivel buckets that tilt 45 degrees right or left for faster operation and better finished grades. These rugged, Euro-design buckets are engineered to dig faster and deeper than conventional bucket attachments. Just one attachment now allows you to clean ditches, create swales, load, grade and carve the earth with speed and versatility.

These rugged tilting buckets use a large double-acting cylinder for smooth reliable power to position the bucket at the desired angle and hold it there during operation. The hydraulic swivel operates on standard system pressure and requires minimal hydraulic volume.

Ajusta-Buckets' hydraulic swivel buckets are made in the USA and available in a wide range of standard and custom sizes to fit any OEM equipment. They will be on display at ConExpo Booth #4358.
